

SUPPORT A COVID-19 GO FORWARD STRATEGY WITH A CMMS

FacilityONE

COVID-19 has changed the way we live, work, and access medical institutions. As we come out of the pandemic there will be significant changes required by healthcare institutions. Here are 5 ways, your organization can use your CMMS to help you emerge from the pandemic and be prepared going forward.

1

Highlight Special Attention Areas

Identify assets such as washing stations, sinks, hand sanitation areas. Make proper hand-hygiene documents readily available on your asset blueprint.

2

Store Disaster Management Plans

Create Disaster Plans including evacuation routes and isolation areas on your floorplans or blueprints. Communicate to your team and ensure team access.

3

New Sanitation PM Schedules

Revamp or enhance your PM Schedules to include new tasks and subtasks to ensure proper sanitation levels. Be sure to assign PMs to doorknobs, light switches etc.

4

Manage Your Inventory

Make sure all your assets can be located & remain functional. Ensure adequate supplies for sanitation but also parts to keep equipment up and running.

5

Tracking and Reporting

Using tags and categories track all your efforts and team. Manage workload and even submit for reimbursements.
